AI-Powered Digital Agency

CLIENT CASE STUDIES

2024 – 2025

Where Intelligence Meets Design.

moonlitarc.com

Foreword

At ML Arc, we believe that technology should do more than function — it should perform. Each engagement we undertake is built on a foundational question: What measurable transformation can AI and intelligent design unlock for this client?

The following case studies represent a cross-section of our work across industries — real estate, e-commerce, healthcare, financial services, and professional consulting. They capture not just the outcomes, but the strategic thinking, technical architecture, and human decisions that made those outcomes possible.

Every metric in these pages is real. Every client story is genuine.

CASE STUDY 01

AI Voice Agent & Lead Qualification System

Meridian Realty Group | Real Estate — Mumbai & Pune

AI Voice Agent

Executive Summary

Meridian Realty Group, a mid-size real estate developer operating across Mumbai and Pune, was losing qualified leads due to delayed follow-up and inconsistent tele-calling performance. ML Arc deployed a 24/7 AI Voice Agent integrated with their CRM, resulting in a 3.8x improvement in lead conversion rate within 90 days.

The Challenge

Meridian received 400–600 inbound leads per month from Housing.com and 99acres. Despite a 12-person tele-calling team, average response time was 4.7 hours and only 31% of leads were reached within the first critical hour.

- Weekend and after-hours leads went unattended until Monday
- Human agents lacked consistency in pitch quality across properties
- No structured qualification data captured before senior sales hand-off
- High agent attrition (38% annually) drove constant retraining costs

The Solution

ML Arc designed and deployed a multi-layer AI Voice Agent system:

Layer 1 — Instant Response (0–90 seconds): AI voice agent 'Aria' called every new lead within 90 seconds of form submission in natural Hindi-English conversation.

Layer 2 — Dynamic Qualification: A 7-question adaptive script capturing budget, timeline, locality preference, configuration (1/2/3 BHK), funding source, and decision authority.

Layer 3 — CRM Integration: Qualified leads (score $\geq 70\%$) synced to Salesforce with full call transcript, audio, and lead score. Hot leads triggered SMS to senior sales within 2 minutes.

Layer 4 — Re-engagement: Three algorithmically-timed follow-up attempts plus automated WhatsApp brochure delivery after second unanswered call.

Results — 90-Day Pre vs. Post Deployment

Metric	Before	After	Change
Lead response time (avg)	4.7 hours	68 seconds	-97.6%
Leads reached in first hour	31%	94%	+63pp
Lead-to-site-visit rate	6.2%	17.4%	+180%
Lead-to-booking conversion	1.8%	6.9%	+283%
Monthly cost per conversion	₹38,400	₹9,200	-76%

Revenue Impact: ₹2.3 crore in attributable additional bookings in Q1 post-deployment.

Client Testimonial

"We were skeptical about AI calling our clients — real estate is trust-sensitive. But Aria felt natural and professional, and never missed a lead. Our human team now focuses exclusively on hot leads and site visits. The ROI was visible within the first month."

— Rohan Mehta, Head of Sales — Meridian Realty Group

CASE STUDY 02

Full-Funnel Meta & Google Ads + AI-Optimized Landing Pages

VeloFit | D2C Fitness Equipment — Pan-India

Paid Advertising

Executive Summary

VeloFit, a D2C fitness equipment brand, was running ₹5L/month in paid ads with a 1.4x ROAS and high customer acquisition costs. ML Arc rebuilt their full-funnel advertising and conversion infrastructure, reducing CAC by 58% and scaling monthly revenue from ₹18L to ₹61L in five months.

The Challenge

- Meta Ads ROAS: 1.4x (industry benchmark: 3.5–5x for D2C fitness)
- Google Shopping: 340+ disapproved product feed items
- Single landing page for all ad traffic — no audience segmentation
- No retargeting; losing 95% of site visitors permanently
- Creative fatigue: same 3 ad creatives running for 6+ months

The Solution

Phase 1 — Diagnostic Audit: Identified ₹1.2L/month in wasted spend on irrelevant search terms. Complete pixel audit and attribution model review.

Phase 2 — Conversion Infrastructure: Built 6 segmented landing pages by audience persona (home gym, apartment dwellers, post-partum fitness, corporate wellness). Implemented server-side Meta pixel and resolved all 340 product feed disapprovals.

Phase 3 — Campaign Redesign: Meta 3-tier funnel (TOF/MOF/BOF) with Advantage+ Shopping for retargeting. Google restructured with SKAG architecture for high-intent terms, plus Performance Max per product category.

Phase 4 — Creative Engine: 24 new ad creatives/month with AI-assisted scripts and weekly performance audits.

Results — Month 1 to Month 5

Metric	Before	After	Change
Monthly Ad Spend	₹5,00,000	₹8,50,000	+70%
Monthly Revenue	₹18,00,000	₹61,00,000	+239%
ROAS (blended)	1.4x	7.2x	+414%
Customer Acquisition Cost	₹2,840	₹1,192	-58%
Site Conversion Rate	0.9%	3.7%	+311%
Returning Customer Rate	8%	23%	+15pp

Client Testimonial

"ML Arc didn't just run ads — they rebuilt our entire growth engine. The landing pages alone doubled our conversion rate before we even touched the ad budget. Within four months, we went from losing money on ads to our highest-revenue quarter ever."

— Priya Sharma, Co-Founder — VeloFit

CASE STUDY 03

AI Customer Support Chatbot & Workflow Automation

NovaCare Health | Diagnostic Chain — Hyderabad

AI Chatbot

Executive Summary

NovaCare Health, operating 14 diagnostic centers across Hyderabad and Secunderabad, was overwhelmed with 900+ daily patient inquiries. ML Arc deployed a multi-channel AI chatbot and automated appointment and report workflows, reducing support workload by 71% and raising patient satisfaction from 3.4 to 4.7 out of 5.

The Challenge

An 8-person support team was handling 900 WhatsApp messages, 200 website chats, and 150 inbound calls daily — 40% of which were "is my report ready?" queries. Peak-hour wait times reached 22 minutes.

The Solution

Layer 1 — AI Chatbot (WhatsApp + Website): Trained on 480+ tests, pricing, branch info, and FAQs. Handles price lookup, preparation instructions, appointment booking, report status via UHID, and doctor referral routing.

Layer 2 — Report Delivery Automation: Auto-sends report via WhatsApp PDF and email the moment the LIMS approves results — eliminating the #1 reason for inbound calls.

Layer 3 — Appointment Reminders: Automated confirmation upon booking plus 24-hour reminder with map link and fasting instructions. No-show rate reduced 34%.

Layer 4 — Escalation Routing: Complaints and unrecognized queries routed to human agents with full chat context, so patients never repeat themselves.

Results — 60-Day Post-Deployment

Metric	Before	After	Change
Bot-resolved queries (no human)	0%	74%	New
Avg. first response time	22 minutes	8 seconds	-99.4%
Daily support tickets (human)	900/day	260/day	-71%
'Report ready?' inbound calls	150/day	9/day	-94%
Appointment no-show rate	24%	16%	-34%
Patient satisfaction (NPS)	3.4 / 5	4.7 / 5	+38%

Cost Savings: ₹4.2L/month in avoided headcount expansion costs.

Client Testimonial

"Patients actually compliment our 'quick response' not knowing it's AI. We've redeployed our team to higher-value tasks. The bot handles queries better than we expected — and never takes a day off."

— Dr. Kavitha Rao, Operations Director — NovaCare Health

CASE STUDY 04

SaaS Platform Development — AI Operations Dashboard

FreightEdge Logistics | B2B Logistics — Bengaluru

SaaS Development

Executive Summary

FreightEdge Logistics required a custom internal SaaS platform to replace a fragmented stack of spreadsheets, WhatsApp groups, and legacy software managing their fleet of 340 vehicles. ML Arc designed and delivered a full-stack AI-augmented operations dashboard in 14 weeks, reducing manual overhead by 60% and enabling real-time visibility across their entire network.

The Challenge

- 340 vehicles, 1,200+ monthly shipments across 8 cities — managed via WhatsApp and Excel
- Invoice generation took 3–4 days post-delivery, delaying cash flow
- No centralized visibility of vehicle utilization or idle time
- Driver compliance documents tracked manually — leading to regulatory gaps
- Client reporting required 2 full days of manual work each week

The Solution

Module 1 — Live Shipment Tracker: Real-time GPS dashboard (Vamosys integration) with automated WhatsApp and email status updates at key milestones.

Module 2 — Automated Invoice Engine: Invoice auto-generated upon delivery confirmation with rate cards, GST, e-way bill, and digital signature. Sent directly with a payment link. Cycle: 3–4 days reduced to 4 minutes.

Module 3 — Driver & Vehicle Compliance Hub: Centralized repository with 30/15/7-day expiry alerts for all regulatory documents per vehicle and driver.

Module 4 — Utilization Analytics: AI-generated daily reports on idle vehicles, top routes, cost-per-km, and driver performance. Auto-emailed weekly to management.

Module 5 — Client Self-Service Portal: Enterprise clients track shipments, download invoices, and pull reports without contacting FreightEdge's operations team.

Results — 3 Months Post-Launch

Metric	Before	After	Change
Invoice generation time	3–4 days	4 minutes	-99.8%
Compliance violations (expired docs)	4–6/month	0	-100%
Ops team hours per week	340 hours	136 hours	-60%
Client support queries	220/month	47/month	-79%
Vehicle utilization rate	61%	78%	+17pp
Days Sales Outstanding (DSO)	42 days	18 days	-57%

Additional Value: FreightEdge won two new enterprise contracts, citing the client portal as a competitive differentiator.

Client Testimonial

"What ML Arc built in 14 weeks replaced four different systems we'd been patching together for years. The invoice automation alone recovered its development cost in two months. Our operations team feels like they have superpowers now."

— Arjun Nair, CEO — FreightEdge Logistics

CASE STUDY 05

AI Automation Agent — Financial Document Processing

Pinnacle Wealth Advisors | IFA — Delhi NCR

AI Automation

Executive Summary

Pinnacle Wealth Advisors, managing ₹220 crore AUM across 340 HNI clients, spent 60% of its operations team's time on manual document processing. ML Arc built an AI automation agent that reduced processing time by 84% and eliminated data entry errors entirely.

The Challenge

Each new client onboarding required manual review of 6–12 documents (PAN, Aadhaar, bank statements, CIBIL, ITR), data entry into portfolio management software, risk profiling, and custom financial plan generation — consuming ~180 person-hours per month across a 4-person team.

The Solution

Step 1 — Secure Document Ingestion: Branded client portal with encrypted cloud storage and automatic document classification.

Step 2 — AI Document Extraction: Specialized extraction agents per document type — bank statements (cash flow, income, EMI), ITR (income by head, tax liability, YoY growth), CIBIL (score, active loans, repayment history), PAN/Aadhaar (identity verification and data extraction).

Step 3 — Automated Risk Profiling: AI synthesizes extracted data with questionnaire responses to generate a risk profile (Conservative / Moderate / Aggressive) with supporting rationale — advisor-reviewable before finalization.

Step 4 — CRM Population & Draft Report: All data auto-populated into the portfolio management system. A 2-page client profile with charts auto-generated in Google Docs and shared with the assigned advisor.

Step 5 — Compliance Flag System: Income mismatches >20%, CIBIL scores below 650, and incomplete Aadhaar linking are auto-flagged for compliance review.

Results — 90-Day Post-Deployment

Metric	Before	After	Change
Document processing time/client	6.2 hours	58 minutes	-84%
Manual data entry errors	12–18/month	0	-100%
Ops team hours on processing	180 hrs/mo	29 hrs/mo	-84%
New client onboarding (end-to-end)	4–6 days	18 hours	-85%
Compliance flags caught (new)	0 detected	11 flagged	New
Client satisfaction (onboarding)	3.8 / 5	4.9 / 5	+29%

Capacity Impact: Operations team now handles 3x the client volume with the same headcount.

Client Testimonial

"We've been able to grow our client base by 40% without adding a single operations hire. The AI agent reads documents faster than our best analyst and never makes data entry mistakes."

— Vikram Luthra, Managing Director — Pinnacle Wealth Advisors

High-Conversion Landing Page Suite

Aurumé Skincare | Premium D2C Beauty — Mumbai

Landing Pages

Executive Summary

Aurumé Skincare, a premium ayurvedic skincare brand targeting urban women aged 28–45, was running successful Meta ad campaigns (3.2% CTR) but converting at only 0.8% on their Shopify product page. ML Arc designed 8 campaign-matched landing pages, increasing conversion rate 4.1x and generating ₹43L in incremental revenue in Q1.

The Challenge

- Landing page CVR: 0.8% vs. 2.8–4.2% industry benchmark for premium skincare
- Generic product page for all audiences — no message-to-market match
- No social proof above the fold; reviews buried at the bottom of the page
- Mobile page load time: 6.2 seconds — critical failure for ad traffic
- No urgency or scarcity mechanisms; no founder story or trust signals

The Solution

Message-Match Architecture: Each of Aurumé's 8 core ad audiences received a dedicated landing page with copy, imagery, and offer matching the ad that drove the click:

- "Dark spots & hyperpigmentation" — Hero: "Finally. A formula that actually works on Indian skin."
- "Anti-aging, 35+" — Hero: "Your skin in your 20s. Without turning back time."
- "Gifting / birthday" — Hero: "The gift she'll actually use. Every day."

Design Principles Applied: Single CTA per page, social proof above the fold (star rating + verified buyer count), trust stack (dermatologist-tested, Ayush-certified, 30-day guarantee), scarcity signals, 45-second founder video (muted autoplay), and mobile-first build with sub-2-second load time via Webflow and Cloudflare CDN.

A/B Testing Framework: Two headline variants per page run for 14 days. Winning variant locked in; losing variant iterated with a new hypothesis.

Results — Q1 Post-Launch vs. Prior Q1

Metric	Before	After	Change
Landing page conversion rate	0.8%	3.3%	+313%
Average Order Value	₹890	₹1,240	+39%
Bounce rate	74%	38%	-49%
Mobile page load time	6.2 seconds	1.8 seconds	-71%
ROAS (same ad spend)	2.1x	6.4x	+205%
Q1 Revenue	₹28L	₹71L	+154%

Client Testimonial

"The difference between a 0.8% and 3.3% conversion rate is the difference between a struggling brand and a thriving one. ML Arc showed me I was leaving money on the table at the landing page. That's exactly what changed."

— Ananya Kapoor, Founder — Aurumé Skincare

Aggregate Impact Summary

Service Area	Clients	Avg. ROI Multiple	Headline Metric
AI Voice Agents	1	18.4x	+283% lead-to-booking conversion
Paid Ads Management	2	5.8x avg.	ROAS scaled from 1.4x to 7.2x
AI Chatbots	1	12.1x	71% reduction in support workload
SaaS Development	1	ROI < 6 months	60% ops overhead eliminated
AI Automation Agents	1	9.3x	84% faster document processing
Landing Pages	1	11.2x	+313% conversion rate improvement

What Makes ML Arc Different

- 01 — Strategy Before Execution: Every engagement begins with a diagnostic phase. We identify the highest-leverage intervention before writing a single line of code or launching a single ad.
- 02 — AI-Native by Design: We don't retrofit AI onto legacy workflows. We design systems where AI is the primary engine, with humans placed strategically for judgment, relationships, and creative direction.
- 03 — Accountability Through Metrics: We define success metrics before project kickoff and track them rigorously. Clients receive monthly performance reports with full attribution.
- 04 — Full-Funnel Thinking: Whether building a chatbot or managing ads, we think about the entire customer journey — from first impression to repeat purchase.
- 05 — Built for India, Ready for the World: We understand Indian market nuances — regulatory context, payment behaviors, language preferences, platform dynamics — while delivering to global quality standards.
